PROFESSIONAL SUMMARY

As a highly motivated and driven student, I have consistently demonstrated strong leadership skills, time management abilities, and a strong work ethic. I possess excellent communication and problem-solving skills, which my involvement in various team projects has further augmented. My passion for continuous learning and adaptability make me an ideal candidate for any position.

SKILLS

Leadership: Throughout my academic tenure, I have assumed multiple positions of authority that have bolstered my leadership abilities. Apart from being consistently elected as a class representative for six consecutive years by my peers, I was also voted in as the president of the Coding Club by staff members and my peers. I guided all club members to achieve their full potential throughout this role. This inevitably led the club to receive the most trophies it has ever received in a year under my leadership.

Teamwork: Of course, being a leader meant I started off being a team player. Throughout my school tenure, I have worked in multiple teams, particularly in the team that I led to winning the Aptech Annual Coding Competition. In a team, I constantly strive to do my best for the benefit of everyone in the team.

Customer Service skills: My experience in retail has given me invaluable insights into the world of customer service and how to deal with customers.

Inter-personal skills: My job as a brand ambassador taught me how to present myself to people to sell my product. Through this endeavour, I not only learnt popular psychological tricks that salespeople commonly use but also how to quickly relate to people to gain their favour.

Programming skills: Through all the software projects I have embarked on, I believe I have extensive knowledge in HTML, CSS, JavaScript, SQL and Python. While these are the main languages I use, I still have experience in C, C#, Kotlin and The React Framework.

Graphic Design skills: Along with programming, as a hobby, I occasionally dabble in graphic design software using open-source software such as Inkscape and Gimp. I also use software such as Figma to design programming projects before I implement them. Furthermore, I am also familiar with popular closed-source design resources such as Canva or Photopea.

WORK EXPERIENCE

Technology Developer – Barclays [2025/Current] :: Currently enrolled in a degree apprenticeship program with Barclays and the University of Glasgow. In this program I get to be a full time student while directly apply the skills I have learnt in the university in an active

workplace. This opportunity not only increases my knowledge in the field of computer science, mathematics and data science but also sharpens my admin skills that I have to adopt at work.

Intern – BT(British Telecommunications) [2024] :: As a student intern at BT, I gained practical experience in data analysis using Python and pandas. I cleaned and explored telecom-related datasets, applied customer segmentation techniques, and built a churn prediction model. Overall, my internship provided valuable exposure to real-world data challenges

Brand Ambassador– Aura Promotions [2024] :: During my tenure as a Brand Ambassador, I gained extensive experience as a door-to-door salesman. This role equipped me with invaluable skills, such as reading body language, engaging potential customers, and effectively selling products. Working on a commission-only basis instilled in me a strong work ethic and a relentless drive to achieve my targets. Additionally, my speaking and presentation skills improved significantly, boosting my confidence and enhancing my social interactions

Volunteer Kitchen Assistant – Wymondham College Kitchen [2023] :: Alongside my stay in Wymondham College, I actively contributed to maintaining cleanliness and order. My responsibilities included table cleaning, floor sweeping, washing plates and assisting with other tasks as needed in the kitchen. This experience taught me the value of teamwork and attention to detail.

Fun Fair Worker– Woolwich Common Fun fair [2023] :: During my tenure at the Woolwich Common Summer Fun Fair, I honed valuable skills that shaped my personal and professional growth. I learned to provide excellent customer service by actively listening, addressing inquiries, and handling diverse personalities. Collaborating with colleagues and vendors taught me the importance of teamwork, while managing ticket sales and cash registers improved my financial literacy. The dynamic fair environment fostered adaptability, and I gained insights into event logistics, including booth setup, crowd control, and safety measures. Overall, this experience continues to benefit me in various contexts.

EDUCATION

University of Glasgow [2025/Current] - Currently enrolled at the University of Glasgow studying Software Engineering.

Whitesands School [2017/2023] – Attained WAEC (A GCSE Equivalent) certification in Mathematics (A1), English (B2), Data Processing (B2), Physics (B2), Chemistry (B3), Further Mathematics (B2), Economics (A1), Civic Education (A1).

Wymondham College [2023/2025] – Studied for A-level certification and achieved grades (A) in Mathematics, (A) in Computer Science and (B) in Physics. I also attained a grade for an Extended Project Qualification – EPQ (C)

FreeCodeCamp [2022] – Was awarded a certification in Responsive Web Design and JavaScript Algorithms and Data Structures.

edX [2021] – Completed an Introductory course in computer science through Harvard CS50.

Springpod [2024] – Completed a Virtual Computing Work Experience with Amazon and a Virtual Quantum Computing Work Experience with Fujitsu.

PERSONAL SOFTWARE DEVELOPMENT PROJECTS

Messaging Application [2021]: After doing a bit of research into network requests, I built a simple messaging application called “Senderxx” using HTML, CSS, JavaScript, SQL and PHP which I used as an entry into a competition held by my school. This project further taught me how to perform CRUD operations on a database using SQL and also how to normalise relational databases.

Productivity Application with a built-in Chatbot Assistant [2022]: Due to another competition held by my school, I developed a multi-purpose productivity software called “Taskmaster” to perform basic operations like note-taking to more advanced operations like storing documentation. The application also comes with a chatbot assistant that can help automate basic operations. This project not only helped me further strengthen my HTML, CSS and JavaScript skills but also was my first interaction with Machine Learning and Natural Language Processing. This project also utilises popular backend services like Firebase, which I learnt how to use because of this project. This project went on to win the competition.

Custom Cipher [2024]: Reading the book “The Code Book” by Simon Singh inspired me to try and create a symmetric cipher of modern cryptographic strength. Leveraging JavaScript, I meticulously designed and implemented the cipher, delving into the intricacies of cryptographic techniques. This project, which I plan to implement in future projects, is publicly available as “Odd-Ceaser Cipher”.

Note: A directory of all my projects can be seen on the website called “Sandbox” which has been linked below.
